## Feature List

Feature	SharePoint 2010	SharePoint 2013	SharePoint 2016	SharePoint 2019
Build parent-child relationships	✓	✓	✓	✓
Ajax support enabled	✓	✓	✓	✓
Unlimited number of cascading levels	✓	✓	✓	✓
Supported single-single, single-multi, multi-single and multi-multi relations	✓	✓	✓	
Supported lookup data from SharePoint lists in all sites within site collection	✓	✓	✓	✓
Supported lookup data from subfolders	✓	✓	✓	✓
Filtering retrieved data using existing list views	✓	✓	✓	✓
Supported default values	✓	✓	✓	✓
Ability to add and edit lookup items on the fly	✓	✓	✓	✓
Supported Datasheet view	✓	✓	✓	✓
Conversion among "ArtfulBits Cascaded Lookup", "ArtfulBits Cross-Site Lookup", "ArtfulBits Parent Selector" columns and standard SharePoint "Lookup" column	✓	✓	✓	✓
Language pack support (desired localization could be added by request)	✓	✓	✓	✓

## Why ArtfulBits Cascaded Lookup Column?

SharePoint Cascaded Lookup is powerful lookup tool that saves your time by reducing presented options and avoids the possibility of incompatible value selection.

## ArtfulBits Lookups and standard SharePoint Lookup columns feature comparison

Feature	SharePoint Lookup	Parent Selector	Cross-Site Lookup	Cascaded Lookup
Lookup data from lists cross-site within site collection			✓	✓
Lookup data from lists on the same site	✓		✓	✓
Lookup data from the same list	✓	✓	✓	✓
Single and multiple lookup	✓	✓	✓	✓
Parent-child relationships				✓
Support lookup data from subfolders		✓	✓	✓
Picker Dialog for searching items in lookup lists		✓	✓	
Filtering retrieved data using existing list views		✓	✓	✓
Supported default values		✓	✓	✓
Adding lookup items via New Item form on the fly			✓	✓
Adding lookup items via inline entering on the fly			✓	
Editing lookup items via Edit Item form on the fly			✓	✓
Excluding own item from lookup list during item editing		✓		
Checking whether hierarchical data is non-cyclic		✓		
Conversion among "ArtfulBits Cascaded Lookup", "ArtfulBits Cross-Site Lookup", "ArtfulBits Parent Selector" columns and standard SharePoint "Lookup" column		✓	✓	✓

## How to Use

First of all, you should create several lists with different data (e.g. Single Line of Text Column) which you would like to use as a source. Then you need to create Cascaded Lookup Column which will relate to your data source. To use Cascaded Lookup column you should select appropriate option in the list of available columns on the Create Column page. Change default settings on Cascaded Lookup Special Settings section in order to adjust column to your needs. For multiple data entry, just select the "Allow multiple values" option, the front-end UI will allow multiple selections to be added/removed from a list. If you're using a series of parent-child Cascaded Lookups, each subsequent field will immediately update as you add or remove each selection from the prior one.

### Cascaded Lookup settings:

- Source site to get information from (*This dropdown list shows all the sites in the current site collection. Choose the site which contains the source list*)
- Source list to get information from (*This dropdown list shows all the available lists in the site you have selected before. Choose source list which you retrieve information from*)
- Display column (from source list) and values to be displayed (*Select the source column which you want to get information from*). Supported source column types include: Single Line of Text, Number, Date and Time, Calculated (output is single line of text), Counter type (ID field).

- Parent Column (not required) for cascaded lookup (*located in the current list*) that triggers a change for this Cascaded Lookup column. If column is not provided, default Cross-Site Lookup column behavior will be applied (no cascading). Lookup, Person or Group, Choice, Single line of text, Yes/No column is available as parent column
- Filter Column (located in the source list) that provides filtering mechanism for this Cascaded Lookup Column. Lookup, Person or Group, Choice, Single line of text, Yes/No column is available as filter column
- “Allow multiple values” property allows multiple selections for Cascaded Lookup column
- “Use filtering by list view” option applies additional filter for proposed items in cascaded lookup (only items from the selected view could be presented in Cascaded Lookup field)

**Create Column** [X]

Cascaded Lookup Special Settings  
Specify special Cascaded Lookup options.

Get information from the following site:  
Cascaded Lookup Column ▼

Get information from the following source list:  
States ▼

Display the following column:  
States ▼

Parent column for cascaded lookup:  
Country ▼

Filter by following column in source list:  
Country ▼

Allow multiple values  
 Use filter by list view

Allow items adding to the source list (referenced list information is getting from):  
 Disabled  
 Item is added using separate list New Item form (display 'Add new item' link)

Allow items editing of the source list:  
 Disabled  
 Item is edited using separate list Edit Item form

Default value:  
--- ▼

Add a column to show each of these additional fields:  
 Created  
 ID  
 Modified  
 States  
 States (linked to item)  
 Version

Example: there are two SharePoint lists: USA States (contains State column) and Cities (City, State column). You have third list (Customers) and need to add State and City column with parent-child relationships. In this case you should add State column (it can be standard SharePoint Lookup, ArtfulBits Cross-Site Lookup or ArtfulBits Cascaded Lookup). Add City column (ArtfulBits Cascaded Lookup) with parent-child relationships after that.

Do the following:

- In “Get information from the following site” drop-down list, select site that contains Cities list
- In “Get information from the following list”, select Cities list
- In “Display the following column”, select City column in Cities list
- In “Parent column for cascaded lookup”, select State column of current list
- In “Filter by following column in source list”, select State column from USA States list

After that State column value changing triggers a change of City column in customer’s list.

In addition, there is useful property that allows adding items to the source list on the fly. For this, you should enable “Item is added using separate list New Item form” option in Cascaded Lookup Special Settings.

Document Library can be selected as lookup source list. In that case ArtfulBits Cascaded Lookup allows to lookup to subfolders. Checking “Use filter by subfolder” allows selecting exact folder from which data will be got. “Show the following items” section specifies which items (and/or folder) will be shown in selection drop-down.

Cascaded Lookup Special Settings  
Specify special Cascaded Lookup options.

Get information from the following site:  
Home

Get information from the following source list:  
Documents

Display the following column:  
Title

Parent column for cascaded lookup:  
(None)

Filter by following column in source list:  
(None)

Allow multiple values

Use filter by list view

Use filter by subfolder  
Test folder

Show the following items

- Items and Folders
- Items and Folders (recursively)
- Items Only
- Items Only (recursively)
- Folders Only
- Folders Only (recursively)

## Conversion

Cascaded Lookup column supports conversion from standard “Lookup” column and vice versa (it allows editing content of Cascaded Lookup column in Datasheet view).

**In order to convert Lookup Column to Cascaded**, you should, first, create SharePoint Lookup column with items for your needs. The next step is creating new column and choosing "ArtfulBits Cascaded Lookup" type. In Column Conversion section select your Lookup column (*from drop-down list*) and click 'Convert' button to convert it to ArtfulBits Cascaded Lookup column.

Column Conversion

Allows to convert an existing SharePoint Lookup column to ArtfulBits Cascaded Lookup column. All existing data will be kept and not affected.

Select an existing Lookup column and click 'Convert' button to convert it to ArtfulBits Cascaded Lookup column

Select a Column...  
Select a Column...  
Cascaded to SP Lookup

Convert

OK Cancel

In order to **convert Cascaded Column to Lookup Column**, you should choose ArtfulBits Cascaded Lookup column in List Settings Page and click “Convert” button (in Column Conversion section) to convert current column to standard SharePoint Lookup. Converting will keep the Cascaded Lookup settings when converting into a SharePoint Lookup column. Conversion of ArtfulBits Cascaded Lookup column to standard Lookup allows editing content in Datasheet view.

## Release Notes
