Overview

ArtfulBits Password Reset Web Part allows users to reset their forgotten passwords from within the SharePoint environment without administrator intervention. If user does not remember his password and wants to log in SharePoint site, he can reset his forgotten password via web part interface, passing through the various degrees of protection, included security questions and / or email confirmation. New password can be shown on page, or sent to user email, or even user can type new password manually.

Why ArtfulBits Password Reset Web Part?

With importance of login security growing and password requirements increasing, it is becoming easier for users to forget their new passwords. With the ArtfulBits Password Reset Web Part, users now have the ability to submit their own password reset requests through SharePoint, no longer requiring IT Administrations assistance. After user identification, he can either type new password manually via web part interface or system will auto generate new one and show it on a page or send via email depending on web part configuration.

Used in combination with ArtfulBits Password Change and Password Expiration Web Part it can substantially improve users' password management.

How to Use

Password Reset Process Flow

Password Reset supports difference verification methods: using security questions and/or email confirmation. The following diagram provided below shows password reset process flow.

Password Reset Global Settings

Before using Password Reset Web Part it is required to activate "ArtfulBits Password Reset Web Part" site collection feature and specify Password Reset global settings for each Web application Zone.

Navigate to Password Reset Settings page to specify password reset global settings (Site Actions → Site Settings → Site Collection Administration → Password Reset settings):

In Authentication Type section, you can see current Web application Zone (for which password reset is configured), Web application URL and authentication type for this zone.

To enable password reset for current zone, check "Yes" under "Allow password reset for this zone?". If "No" is selected, then Password Reset Web Part will not be visible for this zone.

If current zone authentication uses Active Directory users (Windows authentication or FBA with LDAP membership provider), then it is required to provide administrative account, that has a right to reset AD users passwords.

If you want to use security questions to validate AD user identity, check "Enable Security Questions" and specify at least one security question. You should set question displayed in the Web Part and define the field in Active Directory that the user's answer is confirmed against.

<p>Security Questions</p> <p>Check Enable Security Questions to use security questions to verify user identity.</p> <p>Note: This flag is auto determined for FBA membership providers (except LDAP membership provider), and depends on provider's RequiresQuestionAndAnswer option.</p>	<p><input checked="" type="checkbox"/> Enable Security Questions</p> <p>Security Question #1: <input type="text" value="What is your postal code?"/></p> <p>AD custom field name for answer to Security Question #1: <input type="text" value="PostalCode"/></p> <p>Security Question #2: <input type="text" value="What was your dream job as a child?"/></p> <p>AD custom field name for answer to Security Question #2: <input type="text" value="CustomField1"/></p> <p>Security Question #3: <input type="text" value="What is your last name?"/></p> <p>AD custom field name for answer to Security Question #3: <input type="text" value="SN"/></p>
---	---

Note: This flag is auto determined for FBA membership providers (except LDAP membership provider), and depends on provider's "RequiresQuestionAndAnswer" property. If "RequiresQuestionAndAnswer" is set to true, then user should answer a password question for password reset.

In order to send confirmation email before password reset, you should check "Enable Email Confirmation" option. You can change default message displayed for user in web part and confirmation email Subject and Body. You can use the following key templates in email fields: \$USERNAME\$, \$USEREMAIL\$, \$CONFIRMLINK\$.

<p>Confirmation Email</p> <p>Check Enable Confirmation Email option to empower email confirmation before password reset.</p>	<p><input checked="" type="checkbox"/> Enable Confirmation Email</p> <p>An email has been sent to \$USEREMAIL\$ with a link to a page where you can change your password.
 You must change your password within 24 hours. This link will be valid for 24 hours only.</p> <p>Email Subject: <input type="text" value="Forgotten Password"/></p> <p>Email Body: <input \$confirmlink\$\">\$confirmlink\$<="" a><="" cannot="" email.<="" p>"="" p><p>you="" reply="" this="" to="" type="text" value="<p>Greetings!</p><p>In order to reset your password, please click the link below. This link will be valid for 24 hours only.</p><p></p> <p>Email Bcc: <input type="text"/></p>
--	---

Note: If FBA membership providers (except LDAP membership provider) has "RequiresQuestionAndAnswer" equal to True and "EnablePasswordRetrieval" is equal to False, then this option will be disabled in this case.

Password reset allows to generate new password automatically or to type new one manually. In "Password Receive Type" section check appropriated option for it:

- "Generate new password automatically and show it on page" – new password will be generated automatically and will be shown via Web Part. \$USERNAME\$, \$USEREMAIL\$, \$NEWPASSWORD\$ template keys are supported as well.

- "Generate new password automatically and send it via email" – new password will be generated automatically and email will be sent to user email account with new password. \$USERNAME\$, \$USEREMAIL\$, \$NEWPASSWORD\$ template keys can be used in email subject and body.
- "Enable to type new password manually" – users will be able to type new password and confirm it manually via Web Part interface.

Password Receive Type
Specify password reset mode and method the user should receive it.

Generate new password automatically and show it on page
Your new password is: \$NEWPASSWORD\$

Generate new password automatically and send it via email
A new password has been generated and email has been sent to \$USEREMAIL\$ with new password.

Email Subject:
New Password

Email Body:
<p>Greetings!</p>
<p>Your new password is: \$NEWPASSWORD\$</p>
<p>You cannot reply to this email.</p>

Email Bcc:

Enable to type new password manually

In order to avoid any security issues, you can check "Send email notification on password changed". As soon as new password is generated or user types new one manually, system will send email notification to user email address just inform that his password has been changed.

Password Changed Email Notification
Specify whether email should be sent when password is changed.

Send email notification on password changed

Email Subject:
Password Changed

Email Body:
<p>Greetings!</p>
<p>Your password has been changed. If you did not change your password, please contact administrator immediately to avoid any security issues.</p>
<p>You cannot reply to this email.</p>

Email Bcc:

If user account is locked due to AD password policy violations (for ex. an incorrect password was entered three times when user logs in), user can be unlocked automatically. For it, you should check "Unlock account automatically" option in "Additional Settings" section.

Additional Settings
Provide additional settings.

Unlock account automatically

Example:
noreply@company.com
SharePoint Notification -<notify@company.com>

Setting up Password Reset on an Anonymous Access SharePoint Site

Enable Anonymous Access

In order to access to the Web page for the users, that forgot their passwords, you should enable anonymous access for SharePoint site.

Open SharePoint Central Administration → Application Management → select target Web Application → Authentication Providers:

Choose authentication provider:

In Anonymous Access section, check "Enable anonymous access":

After you have enabled anonymous access to Web application, you should enable it for your SharePoint site collections that needs password reset. For that, open SharePoint site and go to Anonymous Access settings page (Site Actions → Site Permissions → Anonymous Access).

In "Anonymous Access" section, specify the parts of SharePoint site that anonymous users can access. If you select "Entire Web site", anonymous users will be able to view all pages in your Web site and view all lists and items which inherit permissions from the Web site. If you select "Lists and libraries", anonymous users will be able to access pages and view items only for those lists and libraries that have enabled permissions for anonymous users.

In order to use ArtfulBits Password Reset web part it is enough to select "List and libraries" option under "Anonymous users can access" box.

Adding Web Part to a Page

After anonymous access to site is configured, you can add Password Reset Web Part to your custom page or use built-in ArtfulBits Password Reset page. This page is included in Password Reset package, and you can find it by following URL: [http://\[sitecollectionurl\]/_layouts/ArtfulBits.WebParts/PasswordReset/PasswordReset.aspx](http://[sitecollectionurl]/_layouts/ArtfulBits.WebParts/PasswordReset/PasswordReset.aspx):

In order to use Password Reset web part in your custom page, you should:

- 1) Enable anonymous access to this page.
- 2) Add Password Reset Web Part to this page:

On Page Edit, click Add a Web Part in the area on the page. Select "ArtfulBits Web Parts" category, select "ArtfulBits Password Reset Web Part" and then click Add.

- 3) Configure Password Reset Web Part:
- a) Select "Edit Web Part" from web part menu.

- b) Password Reset Web Part configuration pane is displayed on the right side of the screen. In this pane you can configure custom properties of web part as for standard web part.
- c) In the "Password Reset Settings" section you can specify default view of the web part. It can be "Forgot Password?" link or password reset form.
- d) To specify password reset global settings, you should click "Click here to open Password Reset settings page" link.
